

License Server Compatibility

The Helix ALM License Server is backward compatible. It supports the Helix ALM or Surround SCM version it is released with and earlier versions, but not later versions.

When you upgrade Helix ALM or Surround SCM, always install the current license server version.

Following are the license server versions and the supported Helix ALM and Surround SCM versions. In the Helix ALM License Server Admin Utility 2008 and later, choose Help > About License Server to view the supported versions.

Note: Starting with 2017.1 releases, TestTrack was renamed Helix ALM and Seapine License Server was renamed Helix ALM License Server.
