

Moving the License Server Between Computers

If you are using the default SQLite server database type, use the following steps to move the Helix ALM License Server from one computer to another.

1. Install the license server on the destination computer.
2. Stop the license server on both computers.
3. On the source computer, copy the LSServer.db file from the LicenseServDb directory to the destination computer. Following are the default application directories:
 - ◆ Windowsâ C:\Program Files\Perforce\License Server\LicenseServDb
 - ◆ Linuxâ /var/lib/splicsvr/LicenseServDb
 - ◆ Mac (license server 2015.1 and earlier only)â /Applications/Seapine License Server/LicenseServDb
4. Start the license server on the destination computer.

If you are using an RDBMS database, you need to dump the database files before moving the license server. Ask your DBA for help.
