

# Using Proxy Servers with Helix ALM Web

Helix ALM Web will work with a proxy server but you may need to verify or change the proxy's configuration.

Check the following to make sure Helix ALM Web will run correctly:

- The IP that Helix ALM Web is running on is not restricted by the proxy.
- The following HTTP commands are enabled: Write, Binary, Text, Read, Type, JavaScript, multi-part form.
- Cookies are not disabled.

Helix ALM Web requires the ability to read/write, execute CGI scripts, upload files to a temp directory, and use multi-part forms, all of which can be disabled if the proxy is improperly configured.

Helix ALM Web also requires a local static IP address in order to run. If you are using a gateway as an Internet connection Helix ALM Web will not work. If you were previously using a gateway and have assigned a static IP to a local computer running Helix ALM Web you may still encounter problems if your network adapter or your web browser are configured to use a gateway.
