

Saving Workflow Event Times from Surround SCM in TestTrack 2008 and Later

Note: This information only applies to TestTrack 2008 and later integrated with Surround SCM 5.0.3 and earlier.

TestTrack 2008 includes the time in the Date field in workflow event dialog boxes, such as Fix. If you enter an event from Surround SCM 5.0.3 and earlier, the time is not displayed in the Date field in the event dialog box. However, the time is saved for the event in TestTrack based on the following rules:

- If you do not have read/write access to the Date field, the value is set to the current TestTrack Server date/time.
- If you have read/write access to the Date field and set the date as the current date, the value is set to the current TestTrack Server time.
- In all other cases, the time is set to 11:59:59 GMT.
