

Date/Time Restrictions Use Server Computer's Date and Time

You can create Helix ALM restrictions based on date/time values. Date/time range restrictions limit results to records that contain or do not contain a date range, date/time range, or specified time period. Keep in mind that, by default, these restrictions use the server's local time as the criteria to evaluate and may not always return results as expected.

For example, a filter includes a restriction that uses the From date option to search a specific date range. When a user who is located in a different date/time zone from the server computer runs the filter, it may not return the same matching results that a user, located in the same time zone as the server computer, would receive. This is because the filter uses the server computer's local date/time zone.
