

Configuring IIS and Apache Web Servers for Helix ALM Web

Files for Helix ALM web clients are hosted on a web server. After installing Helix ALM, you must configure a web server before users can use the web clients.

See [Supported Web Servers](#) for supported versions.

The following links provide specific steps for configuring web servers.

- [Apache](#)
- [IIS 7 and later](#)
- [IIS 6](#)

If you use IIS and TestTrack RM Reviewer or TestTrack TCM Test Runner, additional configuration is required. See [Configuring IIS for TestTrack RM Reviewer and TestTrack TCM Test Runner](#).

Note: If you cannot log in to Helix ALM web clients after configuring the web server, see [Helix ALM Web Returns a 404 - Page Not Found Error](#).
