

Missing Fonts in Helix ALM Formatting Toolbar on Linux

Problem

When editing text in multi-line text fields in Helix ALM on Linux, the font list does not include additional fonts to choose from.

Cause

The standard fonts that Helix ALM uses in its WYSIWYG formatting editor may not be installed on the Linux distribution.

Solution

Use the following command to install the missing fonts on Ubuntu:

```
sudo apt-get install msttcorefonts
```

Following are links for installing the missing fonts on additional supported Linux distributions.

- Red Hat Enterprise, Fedora Core, and Mandriva—<http://corefonts.sourceforge.net/>
- Debian—<http://packages.debian.org/stable/x11/msttcorefonts>
- SUSE—<http://mscorefonts2.sourceforge.net/>
