

Slow Script Warning When Switching Helix ALM Projects in Internet Explorer

Problem

When switching projects in Helix ALM web clients from Internet Explorer, the following warning is displayed:

'A script on this page is causing your web browser to run slowly. If it continues to run, your computer might become unresponsive.'

Cause

Switching projects requires Helix ALM to retrieve a large amount of data and it may take longer than Internet Explorer's time limit for running JavaScript.

Solution

Disable the Internet Explorer warning in the system registry. See [Microsoft KB 175500](#) for information.
