

Forcing Helix ALM Web to Log In to a Specific Project

You can force a log in to a specific Helix ALM project using a direct link to the CGI. First, you need the database ID number for the project. To find this information, start the Helix ALM Server Admin Utility. The ID number is listed in the first column of the Projects dialog box.

The CGI command you use should be similar to the following:

Helix ALM (and TestTrack 2013.1 - 2016.1)

<http://000.000.000/ttweb/index.html#default/25>

TestTrack 2013.0.2 and earlier

- IISâ <http://000.000.000.000/scripts/ttcgi.exe?command=LoginScreen&databaseid=25>
- Apacheâ <http://000.000.000.000/cgi-bin/ttcgi.exe?command=LoginScreen&databaseid=25>
