

TestTrack CVS Integration Problems

Problem

TestTrack locks up when a CVS process locks up. After closing and restarting TestTrack, you cannot perform CVS functions in TestTrack. Sharing violations may occur with files in the TEMP directory.

Cause

CVS is locked up and has write locks on two temporary output files TestTrack needs.

Solution

1. Close TestTrack.
2. Go to the Windows Task Manager and end all instances of CVS (cvs.exe) to free the temporary output files.
3. Restart TestTrack. The CVS functionality works correctly.
