

Missing Subversion Interface Library

Note: The following information only applies to TestTrack 2008.2 - 2015.1.

Problem

When you attempt to configure TestTrack's SCC Integration with Subversion 1.5 on a 32-bit Linux distribution, the following error is returned:

```
'Unable to load the Subversion Interface library from its default location. QLibrary::load_sys:
Cannot load /usr/lib/Seapine/tt/libSeapineSubervsionInterface15.so'
```

Cause

The Subversion Interface library links to two other shared object files: libsassl2.so.2 and libuuid.so.1. Some Linux distributions do not install these libraries by default. If these libraries are not present, the Subversion 1.5 integration will not work.

Solution

Download and install the appropriate libsassl2.so.2 or libuuid.so.1 package for your Linux distribution. The missing library will be listed in the message. If the message states that the libsassl2.so.2 shared object file is missing, you may need to install both library packages.
