

Associating the SoloSubmit Login Page with a Single Project

You can associate the SoloSubmit login page with a single project, bypassing the project selection page. When a user or customer logs in to SoloSubmit, they are taken directly to the bug reporting form.

To set the loginSoloSubmit.htm page to be associated with a single project, you have to uncomment one line and comment out another line. Make sure you know the databaseid value. To find this value, in the Helix ALM Server Admin Utility, click Projects. The database id value is listed in the first column.

1. Edit the loginsolosubmit.htm page in Notepad or another text editor.
2. Find the following function:

```
function gotoSoloSubmitWindow()
{
stringMyURL = new String('/scripts/ttcgi.exe?command=SoloSubmitScreen');
//stringMyURL = new
String('/scripts/ttcgi.exe?command=SoloSubmitScreen&databaseid=1'); //
jumps to solosubmit form for specified database
window.location = stringMyURL; // opens SoloSubmit in the current window
//window.open( stringMyURL ); // opens SoloSubmit in a new browser window
}
//setTimeout("gotoSoloSubmitWindow()",2) //this could be used to
automatically pop-up a solosubmit window
// -->
```

3. Switch out the stringMyURL lines.

```
function gotoSoloSubmitWindow()
{
//stringMyURL = new String('/scripts/ttcgi.exe?command=SoloSubmitScreen');
stringMyURL = new
String('/scripts/ttcgi.exe?command=SoloSubmitScreen&databaseid=1'); //
jumps to solosubmit form for specified database
window.location = stringMyURL; // opens SoloSubmit in the current window
//window.open( stringMyURL ); //openr SoloSubmit in a new browser window
}
//setTimeout("gotoSoloSubmitWindow()",2) //use to automatically pop-up a
solosubmit window
// -->
```
