

Installing SoloBug Language Files

The SoloBug interface is displayed in English by default. Additional language files can be downloaded from the [Add-ons page](#).

SoloBug language files have a .qm extension. The files must be installed in the same directory as SoloBug executable (.exe or .pdb). You are prompted to select the language to use the first time you start SoloBug.

Note: Some SoloBug values, such as the title, instructions, field names, and field values, may be customized by the SoloBug administrator. These values are displayed as entered by the administrator, regardless of the selected language.
