

Surround SCM Server System Requirements

This article provides minimum processor and operating system requirements for the current version of the Surround SCM Server application. The attached PDF file provides processor speed, RAM, and hard drive space recommendations for the server application based on the total number of files and files per branch on the server computer. Following the recommendations helps ensure optimal server performance.

Note: The 64-bit Surround SCM Server is only supported on 64-bit operating systems.

Windows

- Vista, Server 2008, 7, Server 2012, 8, 8.1, 10, Server 2016
- Pentium PC

Linux

- CentOS 6.6 - 7.4, Debian 7 - 9, Fedora 21 - 27, openSUSE 13.1 - 42.3, Red Hat Enterprise 6.6 - 7.4, Ubuntu 12.04 - 17.10
- Pentium PC

Note: The Surround SCM Server database and mainline branches are stored in an RDBMS. See [RDBMS Support](#) for information about supported operating systems, database vendors, and versions.
