

Upgrading from Surround SCM 2008.1.x

Starting with the release of Surround SCM 2009, all data is stored in an RDBMS database. The old, proprietary database format is no longer supported.

It is not uncommon for upgrades to take several hours, depending on the size of your existing installation. If you are upgrading from Surround SCM 2008.1.x, it is **strongly** recommended that you run the latest [Surround SCM 2008.1.x Analyze Utility](#) to address any database issues before the upgrade starts.
