

Helix ALM Items Not Displayed When Attaching Source Control Files

Problem

Issues, test cases, or requirements are not displayed in the Helix ALM Browser dialog box in Surround SCM when you attempt to attach source control files to Helix ALM items.

Cause

Security permissions to edit Helix ALM items are required to attach source control files. If you do not have permission to edit issues, test cases, or requirements, the corresponding item types are not displayed in Surround SCM.

Solution

In Helix ALM, enable the Edit Issues, Edit Test Cases, or Edit Requirements security commands for the security group. Ask your administrator for help if you do not have permission to edit security commands.
