

Metacity Crashes When Using Surround SCM Integrations on Ubuntu

Problem

The Metacity window manager crashes or causes third-party applications, such as IntelliJ IDEA, WebStorm, and NetBeans, to become unresponsive or crash when using the Surround SCM integration on Ubuntu.

The following error may be displayed in the terminal:

```
'Gtk-CRITICAL **: IA__gtk_widget_style_get: assertion `GTK_IS_WIDGET (widget)'
```

Cause

The default Ubuntu theme enables overlay scrollbars, which can cause applications using Qt 4.x and 5.x, such as Surround SCM, to become unresponsive or crash. Refer to Ubuntu bug reports [805303](#) and [848808](#) for more information.

Solution

Use the following command to set the `LIBOVERLAY_SCROLLBAR` environment variable before using third-party applications.

```
export LIBOVERLAY_SCROLLBAR=0
```
