

Locating DOS Batch File Run Reports

If you use a DOS batch file to run multiple scripts from multiple workspaces, QA Wizard Pro run reports are created in a Reports subdirectory of the scripts directory.

In the following example, a batch file runs multiple scripts from multiple workspaces.

```
"C:\Program Files\Perforce\QA Wizard Pro\QAWRunScript.exe"
```

```
"C:\Workspaces\Issues\Issues.qawwspace"
```

```
"C:\Workspaces\Issues\AddIssue.qawscript" /Remote user6
```

```
"C:\Program Files\Perforce\QA Wizard Pro\QAWRunScript.exe"
```

```
"C:\Workspaces\Test Cases\Test Cases.qawwspace"
```

```
"C:\Workspaces\Test Cases\AddTestCase.qawscript" /waittime 120 /Remote user6
```

The reports for these batch files are created in the following directories:

- C:\Workspaces\Issues\Reports
- C:\Workspaces\Test Cases\Reports
