

Setting Playback Options on Remote Computers

You can set playback options on each remote computer that runs QA Wizard Pro scripts. Scripts do not use the playback options set on the computer used for recording.

1. On the remote computer, right-click the qawremote.exe icon in the Windows taskbar and choose Console.
2. Make sure that the status is Idle, which indicates scripts are not running.
3. Choose File > Exit to close qawremote.exe.
4. Start QA Wizard Pro on the remote computer.
5. Choose Tools > Options and click the Playback tab.
6. Select any options and click OK.
7. Restart QAWRemote.exe. The playback options will be used when scripts run on the remote computer.
